STANDERISED DEVIATIONS TEST

```
> ##5 A) Standardised Deviations Test
> table(cut(data2$zx, breaks = seq.int(from = -20,to = 20, by= 4)))

(-20,-16] (-16,-12] (-12,-8] (-8,-4] (-4,0] (0,4] (4,8] (8,12] (12,16] (16,20]
0 1 2 6 11 12 11 5 3 0
```

##i. The Graph Is Very Broad As Compared To A Standard Normal Graph, With A Number Of values Higher Than abs(10)

##ii. The Values Of The Absolute Deviations Are Very High Relative To The Anticipated Value

##iii.The Lower Bound Is Approximately Equal To -2 And The Upper Bound Is Approximately Equal To 6. IQR is 8. There Are Some Outliers On The Lower Side But They Are Absent On The Upper Side

##iv. The Graph Is Positively Skewed. It Looks Like It Is Centered Around 2

##v. The Graduated Rates Don't Depict The Underlying Mortality Rates With Precision

SIGN TEST

```
> ##5 B) Sign Test
> signtest=sign(data2$ZX)
> table(signtest)
signtest
-1  1
20 31
> dbinom(31,51,0.5)
[1] 0.03443253
> |
```

At 5% Significance Level, We Accept The NULL Hypothesis That The Data Is a True Depiction Of The Underlying Mortality Rates

<u>CUMALATIVE DEVIATIONS TEST</u>

```
> ##5 C) Cumulative Deviations Test

> obser=sum(data2$DEATHS)

> expec=sum(data2$EXPECTED)

> x=(obser-expec)/expec

> pnorm(-x)

[1] 0.4697664
```

At 5% Significance Level, We Accept The NULL Hypothesis That The Data Is a True Depiction Of The Underlying Mortality Rates

SERIAL CORRELATIONS TEST

```
> ##5 D) Serial Correlations Test
> serialCorrelationTest(data2$ZX)

Rank von Neumann Test for Lag-1 Autocorrelation (Beta Approximation)

data: data2$ZX

RVN = 1.8355, p-value = 0.5563
alternative hypothesis: true rho is not equal to 0

sample estimates:
    rho

0.1477139
```

At 5% Significance Level, We Accept The NULL Hypothesis That The Data Is a True Depiction Of The Underlying Mortality Rates
